

Representing the Most Innovative Companies in the Commodities Marketplace

Innovation and Blockchain technology enable the tokenization of physical assets. The Tokenized Commodities Council members are at the forefront of digitization, modernizing investing, trading, and ownership of commodities.

The Future of Asset Tokenization is Unlimited

Blockchain technology allows for the tokenization of commodities. This involves the digitization of real assets and the recording of such on a blockchain. The use of blockchain creates a permanent and immutable record, offers transparency, and easy instant trading.

A token itself has no intrinsic value, but commodity tokens are representations of the underlying assets, and as such, they derive their values from them. Such assets could be gold, oil, diamonds, soybeans, or just about any other commodity.

Benefits of Tokenized Commodities:

✓ Liquidity

✓ Transparency

✓ Accessibility

SOME OF OUR MEMBERS

Mission

The **Tokenized Commodities Council (TCC)** is a nonprofit trade association established to educate both the investment community and the general public about the benefits of tokenizing physical assets.

We aim to empower our members and advocate on their behalf for the purpose of advancing innovation and the adoption of digitized commodities.

Educate

Educating investors, the finance community, commodities producers, and the general public about the benefits of tokenizing assets.

Empower

Offering thought leadership, networking opportunities, industry intelligence, and options for partnerships that will enable economic growth for our members.

Advocate

Advocating on behalf of our members to establish digitized commodities as widely accessible and desirable investments.

\$12 TRILLION

estimated size of the commodities markets by 2026

Tokenization of Commodities has a Huge Potential

Members can represent **tokenized commodities** in any of the 4 categories:

Metals

Energy

Livestock

Agriculture

Sustainable Industry Practices

TCC works with its members to identify environmental, social and governance issues, and to find solutions to address them. Among our highest priorities are climate change as we collectively work to shift to a low-carbon global economy. Tokenized commodities can be a powerful tool for sustainability and the implementation of ESG practices.
